"Which are You?"

Are you an active member, the kind that would be missed? Or are you just contented that your name is on the list? Do you attend the meetings and mingle with the flock? Or do you stay at home and criticize and knock? Do you take an active part to help the work along? Or are you satisfied to be the kind that just belongs?

Do you ever voluntarily help the guiding stick? Or leave the work to just a few and talk about the "Clique"? Come to meetings often and help with hand and heart. Don't just be a member --- but take an active part. Think this over, Member, you know right from wrong. Are you an active member, or do you "just belong"?

President's Message

By Dona Martin

Spring Pruning is progressing, despite the nasty cold weather and rain. However, this has limited participation by "the public" and the appearance of as many new volunteers. Please come down and help as we try to finish on schedule, by February 17th. The **Volunteers' Thank You Party will be on Saturday the 24th.**

Don't forget, too, that we want the garden to look its best for the **MCC Rose Garden Tenth Anniversary Celebration**, being held on Friday, April 20th. Chairman **Cheryl Doan** has events planned all day long and we hope you will find time to attend. More information will be forthcoming!

We are excited to note that **Jim Berridge** has returned to the operations side of one of our favorite nurseries, **Berridge Nursery** in Phoenix. We look forward to his attendance at one of our meetings in the near future. Jim's exuberance and infectious love of roses is matched by his years of experience, from working in his father's nursery as a young boy and his participation in the nursery industry. He will be providing raffle donations to each of the five Valley rose societies each month, so be sure to say welcome back to him when you stop by the nursery!

This is going to be a great month for rose and community activities. Please stop by our booth at the Mesa Convention Center during the **Winter Visitors Expo** on Wednesday, February 7th, from 9:00 a.m. to 1 p.m. That will of course be followed by our monthly meeting, with lots of timely information presented on Spring Rose Care.

And then one of our favorite and most important fund raisers, our **Fourth Annual Rose Auction**, with Auctioneer Extraordinaire, **Bob Martin**. We have wonderful assortment of roses for auction, some for sale, the Silent Auction, the raffle and garden products sale. **Please invite everyone you know! This is a great opportunity to add both very rare and very popular roses to your collection at great prices!**

More news: Ashdown Roses has announced **Ashdown West**. Working together with an ever expanding selection of rare and unusual roses, **Cliff Orent** of Palm Desert area has joined with Paul Zimmerman and will be shipping from his collection of over 5000 roses as well.

10th Annual Arrangement Workshop

Saturday, March 10, 2007
10:00 AM – 3:00 PM

Please join us for our annual Arrangement Workshop and learn how to prepare traditional arrangements for home and for Exhibition.

Six-foot roses! Organic Bouquet organicbouquet.com

Call them "extreme roses"; these flowers might tower above the person who receives them. Early in 2007, Organic Bouquet will introduce these six-foot-long roses to the U.S. market.

The roses boast a larger head size - more than two inches high and two inches wide, about twice the industry norm - as well as a higher petal count, a minimum vase life of seven days (compared with about five for standard roses), and unique colors. Red Intuition is light red with streaks of deep crimson, Pink Intuition follows the same variegated pattern, with pale pink and fuchsia and for the traditionalist, there's a classic red.

Gerald Prolman, 47, founded Organic Bouquet with the belief that a growing number of consumers want their flowers to deliver two messages: "I care about you and I care about the earth too."

Making the supreme declaration of love will not come cheap. After all, the flowers require more labor when they're growing and take 100 days to mature - two to three times the industry norm. Plus, the six-footers have to be shipped in special boxes. "You should have seen the expression on the DHL guy's face," Prolman says. "He couldn't believe we had roses that long." Prolman's roses will set you back about \$21 a stem, or \$250 for a dozen (including shipping). He has already placed an advance order for 100,000 in 2007. --Amy Stewart

Rosarians Corner By Steve Sheard

The Stubborn Weed!

How do you get rid of a "weed" that has rooted very close or within, one of your rose bushes? These "weeds" are often an unwanted tree or shrub seed that has rooted and before you notice, it has sent down a very strong tap root and begun to enjoy all the nutrition you are feeding the roses.

The first line of attack is to give the Rose Bush a MAJOR soaking – almost making the ground "soupy", wait for the next storm to help with the soaking. This is an ideal time of year to do it as you should have just pruned your roses and there is less chance of the rose getting "fresh" with you!
Get hold of the weed, as close to the ground as possible, and pull it out.

Caution Make sure your Tetanus shot is up to date so that when your rose gets to close you are somewhat protected.

“The Minimalist Approach”

ROSE CARE CALENDAR by Kitty Belendez

For Those Who Only Have Time to Do the Bare Minimum Necessary
For Their Roses to Survive and Grow Satisfactorily

JANUARY	Prune back rose bushes about 1/2 in height. Remove all foliage Spray with a dormant spray when finished pruning. Clean up all rose debris (leaves, petals) and discard in trash. Plant new bareroot roses.
FEBRUARY	Apply mulch around each bush. Apply Preen granules (on top of mulch) to prevent weeds. If no rain, water roses as needed.
MARCH	Apply 90-day slow-release fertilizer granules, NPK 14-14-14. If no rain, water roses as needed. Spray Funginex to prevent mildew, the 3rd week of the month.
APRIL	Spray Orthene insecticide if needed, but only once a month. Wash down foliage twice a week to prevent spider mites, prevent mildew, wash off aphids. Keep roses watered as needed; don't let them dry out.
MAY	Keep roses watered well throughout the month. Remove spent blooms. Make sure automatic sprinklers are working properly.
JUNE	Keep roses watered well throughout the month, daily if necessary. Apply 90-day slow-release fertilizer granules, NPK 14-14-14. Apply Preen granules (on top of mulch) to prevent weeds. Wash down foliage twice a week to prevent spider mites, prevent mildew, wash off aphids.
JULY	Keep roses watered well throughout the month, daily if necessary. Wash down foliage twice a week to prevent spider mites, prevent mildew, wash off aphids.
AUGUST	Keep roses watered well throughout the month, daily if necessary. Wash down foliage twice a week to prevent spider mites, prevent mildew, wash off aphids. Remove all spent blooms to encourage fall bloom cycle.
SEPTEMBER	Apply 90-day slow-release fertilizer granules, NPK 14-14-14. Keep roses watered.
OCTOBER	Spray Funginex to prevent mildew, the 1st week of month. Spray Orthene insecticide IF needed, but only once a month. Keep roses watered, as needed.
NOVEMBER	If no rain, water roses twice a week, or as needed.
DECEMBER	Plan for new rose purchases.

Looking for some new ideas?

These two rose care calendars are presented by expert rosarian and exhibitor Kitty Belendez of Valencia, California. We all tend our gardens a little differently. Sometimes a little change in our routine helps us find an new practice or product that can make garden care easier and/or more successful!

Rose Care for February

**Dona Martin,
ARS Consulting Rosarian**

Spring Pruning – There's still time to prune, but try to finish by the middle of the month. Prune back your roses to about 1/2 - 2/3 of their current height. If plants are five feet tall, cut them back to 2½ - 3 feet. One more time: Cut out all spindly, crossing and dead wood, which will help open up the center of the plant to let the sun get down to the bud union. Dead canes should be removed *at the bud union* to open up room for new basal breaks. (Don't leave stubs!) Strip off all leaves and throw them away. Do not leave cuttings as part of the mulch, as the old leaves may contain disease spores and over wintering insects. You should end up with from three to eight upright canes for hybrid teas, more for floribundas, OGRs and shrubs. You may have more canes if you are growing roses on 'Fortuniana' rootstock. OGRs can be shaped to keep them in bounds at least the first two to three years, then thinned as necessary.

Another thought on late pruning: go through your garden and at least prune perhaps half of each bush, preferably on the west side of the bush. This is better than not getting to them at all. Then go back through and prune the other side of the bush. This also serves to extend and stagger your bloom time. (This is the reverse of what we sometimes do in the fall.) It will be especially more noticeable if we have an unusually warm spring.

After Pruning – Spray the soil with Orthene, Diazinon or Merit to kill insects, especially thrips that are over wintering below the soil surface. Spray the canes with a good fungicide, such as Funginex, which is a mildew *preventative*. These are preventative measures that will save much work later on. If mildew does get established, the best new irradicant on the market by far is Compass, available on Rosemania.com. (Yes, it's pricey, but worth it! So find a buddy or two to

share it with...)

Fertilizer – If you use good organic fertilizers like alfalfa pellets and Miller's Rose Food or Groganic, available from Mike Jepsen, they may be applied after pruning on established bushes. In our gardens, we apply 2 cups Groganic plus 1 cup alfalfa pellets per large rose bush, grown in the ground; half this amount for miniatures in the ground. For roses grown in pots, use ½ the above rate for standard roses or miniatures. When fertilizing, water thoroughly before application and again afterwards to prevent root burn. Epsom salts can be applied this month or early March, at a rate of ½ cup per large bush. The magnesium will promote basal breaks. A second application comes in early April or about six weeks after the first.

Planting – Bare root roses may still be planted into February, however few are now available locally. Be sure to hydrate them well, fully immersing them in water for *at least* 24 hrs, even up to a week or two if out of the sun. Add some Superthrive to the water to strengthen them prior to planting. If we have unusual heat, it is more important than ever to keep the canes moist when trying to get them to bud out. Try covering them with wet mulch or peat moss, held around the canes by a bottomless brown grocery sack. Continue to keep the mulch wet until growth has started, then gradually wash it away! This really works and makes a big difference in how well the buds begin to grow.

This is also a good time to transplant. Roses transplant well when care is given to keeping the root ball intact and to not letting the roots dry out. Plants can be placed in a kitchen or grocery garbage bag to keep the moisture in for a short time or in a pot for longer holding. Continue to water! The tops should be pruned back in proportion to the root system. Potted roses may still be planted through March and very early April. Berridge Nursery in Phoenix will start selling its *new* stock of potted roses in early March, but has some of last years pots out

now. Harpers, Bakers and A & P Nurseries have potted roses, with the latter carrying an especially nice supply of tree roses.

When planting any roses, be sure to check for good drainage by filling the hole and making sure the water soaks down within half a day. Mix up to 50% perlite into your planting mix to keep it loose and aerated. Add a cup of Dis-pursal to the hole to help break down tight, clay soils. When adding nutrients to the hole remember NOT to mix Triple Super Phosphate in with the soil mix. Place it in clumps around the perimeter of the hole (on the sides of the mound for bare root), where the roots will reach it. Mixing it in the soil allows it to bond with the soil and so becomes much less available to the plant.

As roses start to leaf out, irrigation should average once a week early in the month and twice a week by month's end. If you drip irrigate, set the flow at three to four gallons of water per bush. If you flood irrigate, water deeply once a week throughout the month. Always have a wide basin around the base of the bush to keep the water from running off. If you are adding new watering systems, talk with LeRoy Brady or me about in-line drip hose, such as Netafim, which is used on Arizona highway landscaping.

Finally, don't forget to apply a 3-4" layer of forest mulch or pine needles around the roses and throughout your beds. It will help hold the moisture in, prevent weeds and keep beds cooler as it warms up.

For additional information, visit one of our many pruning and planting demonstrations or articles on our web site:

www.roses4az-mevrs.org

VALENTINE'S DAY

From Weeks Roses

Looking for some flowers that will last longer than a week this February 14th? How about the clustering red climber Valentine's Day? This deep, velvety red flowered, medium sized climbing rose repeat blooms on new and old wood.

Disease resistant and hardy, this is a perfect red rose for balconies, low fences or other areas where space is at a premium. Dark green leaves act as a backdrop to the clusters of blooms. So, this year, go ahead and deliver the dozen long stemmed, red roses to your Valentine, just add Valentine's Day to your garden as well and enjoy the beauty for year to come.

This Tom Carruth climbing minifloral is a 2006 introduction, available from Weeks Roses. It is a cross of Amelia x Raven, with slight fragrance and very double blooms on canes of six to ten feet.
